

### **Queensbridge, ETN Gives You One of the Few Paths to Financial Freedom**

Achieving financial freedom is among the aspirations of many people around the globe. Freeing yourself from the burden of debt brought about by mortgages, loans made and rising interest rates allow you to enjoy your life while you are still in your prime. While there have been many claiming to be paths towards achieving financial freedom, Exchange-Traded Notes or ETNs are among the few that has made it possible for investors. What is an ETN and how can it help you realize the financial freedom that you have longed for many years now?

While ETNs have always been looked upon by market watchers as a risky venture, it is one investment that is worth the risk. A quick search online about what an extend-traded note is would immediately inform you that it is an unsecured and unsubordinated debt security issued by underwriting banks. Its returns are oftentimes pegged to the performance of a market benchmark, or in some cases, market strategy. Like most debt securities, this type of investment also has a maturity date. The one thing that makes it risky in the eyes of many is that the only thing backing it is the credit of the issuing bank. When you buy an ETN, the underwriting bank guarantees to pay the amount of money shown in the index, less investor fees, upon the note's maturity.

There are various reasons why ETNs can be the path towards your own financial freedom. For starters, it features perfect index tracking. Investments like bonds, shares of stock or commodity futures oftentimes make adjustments in order for them to accurately track their underlying indexes. As such, it often results in additional costs on the part of the investor. Since ETNs are not backed by these types of securities, additional costs that results from tracking errors are fully eliminated. In short, the performance of your ETN, less fees, will accurately mirror how the underlying index performs. [For more information, click here.](#)

### **Rocket Fuel, online payment systems – why ‘one click’ payment methods matter**

The fast-paced digital world of today has yet produced another innovation which made it easier for consumers to get hold of products or items they want.

Introduced by Amazon.com during the early stages of the World Wide Web, the technique ushered in a new era where digital shopping is the norm.

While most people refer to all types of online payment systems as a “one-click” payment technology due to its ability to process payments in one click, it is a patented product introduced by Amazon. A check at the United

States Patent Office would reveal that US 5960411 was issued by the office to Amazon.com and that the company also owns the 1-click trademark.

With the passing of time, however, people began to use the term in a generic manner and soon, all payment systems were known as “one-click” payment methods. [For more information, click here.](#)

***Making It Easy for Everyone - with online one click payment systems, transactions are verified and confirmed in almost a wink of an eye.***

## Keep the Oceans clean by Opting for Natural Polymers in Package Production

It is often said that the price of progress is usually environmental degradation where you see forests giving way to settlements and air getting thick by fuel emissions. As if this is not enough, this is further exacerbated by the irresponsible disposal of waste by some which lead to water pollution. A study conducted by researchers at the National Center for Ecological Analysis and Synthesis revealed that each year, around 8 million metric tons of plastic find their way to the seas and oceans. To give you an idea of its volume, imagine 5 grocery bags that are filled to the brim with plastic for every foot of all shorelines on Earth. Worse, the same study projects that by 2025, the yearly input will be twice as many, or ten grocery bags filled to the brim with plastic for every foot of coastline on Earth. Solutions are on the way, however, as some companies are turning to more natural fibers to reduce, if not eliminate, this environmental threat to oceans.

While most packaging companies continue to make products that wreak havoc to the environment, new startups like the Sky Blue Packaging are finding ways to minimize the impact to the world's oceans. They have recently found a way to do this by using natural polymers for use in packaging products. Packaging products made with natural polymers included as the main ingredient is projected to reduce ocean pollution drastically. This is due to the very nature of the material which is water-based, meaning the material may disintegrate in water without having to pollute it in a huge manner. The best aspect about packaging made from natural polymers is that when it disintegrates, it becomes digestible food sources that can be eaten by microorganisms whether on soil or oceans. Compare this with some regular packaging now where decades may pass but still you will see the same old packaging material as if you just threw them yesterday.

On the part of innovative start-ups like Sky Blue Packaging, they have partnered with the Malaysian government to address the seemingly insurmountable pollution of the seas. Fruitful efforts like introducing natural polymer packaging to Dominos Pizza, V-Care Pharmacy and Gold Screen Cinemas, among others, are already producing good results. It is even projected that such pilot endeavors would soon become a benchmark to follow for neighboring countries in the Asian region.
